

Allergy Serum Test and Immunotherapy Treatment

Screen Test:

Nextlab screens provide a cost-effective solution if you suspect allergic disease. You have the option of an 'Environmental Screen' (Grasses, Weeds, Trees, Crops, Indoor) or 'Food Screen', with the results displaying either a single positive or negative result (please see example to right). You can then investigate further if desired, by expanding any positive allergen panel to gain individual allergen results.

SCREEN ENVIRONMENTAL PANEL	
Grasses	NEGATIVE
Weeds	POSITIVE
Trees	NEGATIVE
Crops	NEGATIVE
Indoor	POSITIVE

Panel Test:

The Nextlab Panel tests include the 'Environmental Panel' (inc. 38 UK specific allergens) and 'Food Panel' (inc. 23 allergens). You have the option to test just environmental, just food, or run a complete test for both ('Complete Environmental and Food Panel'). Please see an example below of how part of the Complete Environmental test is displayed.

Immunotherapy:

If there are significant results within a panel test then treatment set options will be suggested to you, or you have the option to compose your own treatment set. To order immunotherapy, please email us at info@cvcgroup.co.uk with the client's name and treatment option.

Treatment option 1	Treatment option 2	Compose your own
